

• AI ENGINEER / MACHINE LEARNING / GENERATIVE AI

Building intelligent *systems* for real-world problems.

I design and build AI systems across **machine learning**, **generative AI**, **computer vision** and **intelligent automation** — turning complex data, documents and workflows into useful, well-engineered products.

BUILDING

Intelligent Systems

EXPERIENCE

06 Months

— NK, '26

I work at the intersection of *AI*, software engineering, and real-world *problem solving*.

FIELD OF PRACTICE

I.

I'm **Naveen Khan**, an AI engineer based in Karachi, Pakistan. My work spans **machine learning**, **generative AI**, **retrieval-augmented systems**, **computer vision** and the *full-stack productisation* of intelligent features — from research prototype to production backend.

I build **RAG assistants** that read through enterprise documents, **clinical data tools** that surface cohort insight from messy EHR tables, **vision pipelines** for medical imagery and wearables, and **AI agents** wired into real workflows through FastAPI, n8n and webhooks. I care about the engineering underneath as much as the model on top.

Selected Work.

I EIGHT PROJECTS
ACROSS HEALTHCARE,
CUSTOMER AI, RESEARCH

03 — 12

01	ClinData Explorer AI FOR HEALTHCARE	AI-powered clinical cohort and data-quality explorer for hospital research desks.	TEXT-TO-SQL • DATA QUALITY • FULL-STACK AI	VIEW →
02	McDonald's AI Agent CUSTOMER SUPPORT • ORDER MGMT	AI customer-support and order-management workflow for retail F&B.	LLM • AI AGENTS • FASTAPI	VIEW →
03	CardioRisk AI CLINICAL DECISION SUPPORT	Heart-disease risk prediction prototype for clinical decision support.	CLASSIFICATION • HEALTHCARE • ML	VIEW →
04	Enterprise RAG Assistant DOCUMENT INTELLIGENCE	Retrieval-augmented generation system for enterprise document intelligence.	RAG • VECTOR EMBEDDINGS • SEMANTIC SEARCH	VIEW →
05	Medical Image Classification DEEP LEARNING • HEALTHCARE	Deep-learning system for medical image classification with augmentation pipeline.	CNN • COMPUTER VISION • AUGMENTATION	VIEW →

01. ClinData *Explorer.*

An AI-powered clinical cohort and data-quality explorer designed for hospital research desks — turning 900K+ patient records into queryable insight with natural-language SQL, on-the-fly cohort filtering, and live data-quality rule evaluation.

AI FOR HEALTHCARE

Karachi

"I build AI systems, but I care about what they *actually* solve.

I'm **Naveen Khan**, an AI engineer based in Karachi. I trained as a **Computer Systems Engineer** at **Mehran UET** (2021–2025), and I've spent the last six months in full-time AI engineering — shipping *real* RAG assistants, clinical-data tools, and customer-facing agents that need to actually work, not just demo well.

My practice sits between **research** and **product**. I like the moment when a model becomes a feature, when a notebook becomes a service, when messy real-world data turns into something a clinician, a customer, or a researcher can actually use. That bridge is where I work best.

Outside of shipping production work, I keep one foot in *research* — most visibly on SAFELINK, a multimodal wearable for personal safety. I read papers carefully, prototype fast, and prefer a clean minimal system over an impressive one.

FEATURED RESEARCH

SAFELINK: A Multimodal Smart Wearable for Personal Safety.

A 12-month research project exploring how **computer vision**, on-device inference and IoT sensors can be fused into a discreet wearable that detects threat contexts in real time and routes live location + audio to trusted contacts through an SOS escalation path.
